

Quask's Enterprise Integration Platform offers a sophisticated integration capability that allows data to be ported to and from Quask forms. Highly configurable, data can be extracted from and output to a wide variety of systems and in many different formats.

output in the following data formats

- XML
- .DOC / .TXT / .CSV
- Flat File
- PDF
- SAP-IDOC
- HIPAA
- X12 EDI
- EDIFACT

Enterprise Integration Adapters

Our integration component allows forms to integrate with the following systems

- Most Commercial Databases
- Flat Files
- Oracle
- SAP
- Siebel
- PeopleSoft
- JD Edwards
- SSA Global
- Sage Software
- Microsoft

Output Transports

Having decided upon your output format, you are then able to output your data to the destination system using one of the following transports

- HTTP(S)
- FTP(S)
- POP/SMTP
- EDI-INT (AS1, AS2, AS3) Drummond Certified
- If required, all major VAN providers

Getting Data Into Quask Forms

As well as getting data out of a form, the Enterprise Integration Platform also enables you to get data from a 3rd party application or database into a Quask form. The above formats and transports can be used as valid source formats.

Output and Input Data Formats

When information needs to be sent to other systems, a form sends its data in XML format to the Enterprise Integration Platform where it can be transformed and then output to almost any other system. Data can be
